

IN THE SPECIFICATION

Please amend the paragraph beginning at line 12
of page 9 as follows:

--It is foreseen to sense the human motion by
sensors that are remote from the human. For example, it
may be possible in some situations to monitor
respiration, and motion ~~be~~ by sound and motion sensors in
a room and so the human would not have to wear the
sensors. However, for the most reliable sensing and for
mobility of the person, the sensors should be worn on the
person's body.--
